1916 Traub

As rare an American motorcycle as you'll ever see, the one and only Traub remains a mystery. It was discovered in 1967, concealed in the brick wall of a residence in Chicago. Its maker is unknown. All of its parts—excluding the seat, carb and magneto—are apparently hand-built. None of the parts is interchangeable with the components of any other early machine. The bike is in perfect operating condition and performs flawlessly to speeds in excess of 80 mph. It's usually on display at Dale Walksler's Wheels Through Time Museum in Maggie Valley, North Carolina.
